PROJECTS

Personal Website *Html/Javascript/CSS..*
Took 3 weeks to make the second version with responsive design and better layout while the first version took 6 weeks to learn, design, build and upload the personal website. Coded using html5/Javascript/Jquery/CSS/(CSS3) with fullpage.js, Bootstrap framework Implemented

RiskyPhone *Java/Android*
Generated the idea behind this Android application based on a popular internet trend called "extreme phone pinching ".
Designed the user interface using Adobe Photoshop and coded it using Android Studio.
Worked with a friend together during a hackerthan.

Stock Simulation *Java/Windows*
Generated the idea of software from a real world problem that stock trading is complicated for people with little or no backgrounds
Designed and coded the main functions using Java by jGrasp.
Designed the classes and objects within the software with UML.
